## EXPERIENCE

### Workday, Dublin — Application Development Intern

January 2019 - August 2019

**Developing-** Worked as part of the Workday Learning development team. Completed stories and developed features which are now in use in production and used by millions of users

**Agile** - Worked as part of an agile development team who consistently delivered high quality software. Took part in all agile ceremonies.

**Testing** - Developed code with a high level of testing and automation throughout. Also contributed to code reviews and peer programming sessions.

**Teamwork** - Experienced working as part of a large organisation working with Product Managers as well as User Experience and User Interface designers.

## PROJECTS

### Final Year Project

Developed an Android application to monitor driver fatigue and warn drivers showing signs. This app was written in Java, used Python for Data Analysis and used Firebase for backend functions and Database. The application used the users front facing camera to track and monitor their faces in Real Time.

### Social Media Application (College Project)

Developed this application using Java, Spring and MySQL. The application allowed users to carry out all basic social media functions (create account, add friends, send messages, update their status)

### Burger Builder Application (Personal Project)

Developed this application using JavaScript React and Firebase. The application allows users to create and customise a burger, place an order and view all their previous purchases.
